**SPEED
POWER
HAMMER™**

NEW

joran®

Speedhammer POWER – designed for professionals.

As a full range supplier and masonry specialist IRWIN is serious about drilling. The use of rebar reinforced concrete is increasing and rebar hits become a common problem during construction work.

It is hard to locate the steel bars in the concrete structure when drilling holes for anchor fixings.

If standard drill bits hit rebar, they quickly wear out, break or get stuck.

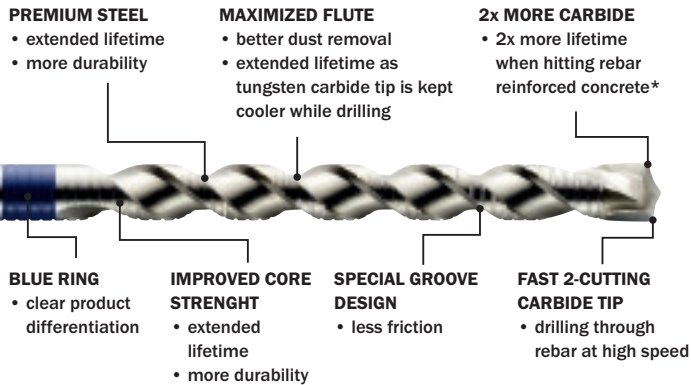

IRWIN now offers a problem solver for drilling into rebar reinforced concrete – **The IRWIN Speedhammer POWER.**

IRWIN Speedhammer POWER:

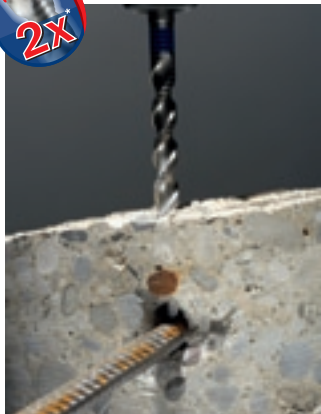

- Line Extension to existing Speedhammer Plus range
- 2x more carbide in the tip* for extended lifetime and more durability
- 2x more holes into rebar reinforced concrete*

Recent end user research shows the most important factor in the design of the **IRWIN Speedhammer POWER** is lifetime. Based on these test results we created this Premium drill bit.

POWER through rebar!

*vs. Speedhammer Plus

What happens when you hit rebar with a traditional hammer drill bit?

- Drill bit starts vibrating
- Drill bit can get locked and snap off
- Tip gets hot, starts glowing, melts and falls out

What options do you have when hitting rebar?

1. Stop drilling, get out of the rebar reinforced concrete, relocate the hole and start drilling again
 2. Get the drill bit out of the rebar reinforced concrete, switch bits and go on with a metal drill bit
- Both solutions take a lot of time and can be really frustrating!

Hitting rebar - a problem? Not for IRWIN!

There is no need to relocate the hole and drill again with the new **IRWIN Speedhammer POWER** – the IRWIN solution for rebar drilling.

Thanks to 100% more carbide in the tip* the NEW **Speedhammer POWER** allows you to drill through rebar quicker and easier!

*VS SPDH Plus

Features & Benefits

- drills through rebar reinforced concrete **straight** and **fast**

- special tungsten carbide tip design
- 2x more carbide in the tip*
- expanded lifetime and more durability

- sustains twice as many rebar hits than **Speedhammer Plus**

Patented high performance carbide tip

Maximize your cost per hole ratio

The IRWIN Speedhammer POWER achieves an up to 200% better cost per hole ratio in comparison to main competitors.

VALUE FOR MONEY - PAY LESS FOR MORE HOLES

10 x 160 mm	Holes (100% hits in rebar)	Cost per hole*
IRWIN Speedhammer Power	100,0	0.30£
Rebar Drill Bit Competitor 1	44,9	0.99£
Rebar Drill Bit Competitor 2	33,8	1.45£
Rebar Drill Bit Competitor 3	114,0	0.73£

IRWIN Speedhammer POWER was tested against 3 competitors in terms of cost per hole ratio when hitting 100% rebar reinforced concrete.

* The cost per hole ratio can be calculated by dividing the drill bit price by the total numbers of holes that were drilled.
