

New Product – Key Facts

Product:

Chain Pipe Wrenches

- Design allows for the chain to be looped around the pipe and fastened
- Long lasting and by reversing the jaws the life of the wrench can be doubled

Application:

Designed for use in confined spaces

Handle

The handles of 233C and 234C are tubular steel attached to solid ductile iron castings

The 231 1/2, 232 1/2 and 240 are entirely drop forged steel

Jaws

Jaws made from drop-forged steel which is then hardened and tempered for maximum strength

Only the front set of teeth bear on the pipe which means that when these become worn the jaws can be reversed, doubling the life of the tool

Confined spaces

Irwin Chain Pipe Wrenches are used in confined spaces, where the pipe is in a trench, against a wall or close to other pipes

Once the chain is looped around the pipe and locked, the jaws will grip in the direction of the turn. The pipe can be tightened or loosened with short strokes of the handle
